

The Hawaii-based Longline Logbook Summary Report January–December 2009¹

Pacific Islands Fisheries Science Center
Fisheries Monitoring and Analysis Program

This annual report summarizes data on fish catch and fishing effort by Hawaii-based longline vessels for calendar year 2009. Results are based on the date gear was hauled, as reported by vessel operators to the National Marine Fisheries Service in Federal logbooks of daily fishing activity. The report covers longline operations for fishing trips completed in 2009 and most, but not all, data from trips that began late in the fourth quarter of 2009 and continued into the first quarter of 2010. Therefore, the 2009 summary statistics reported here are preliminary.

During 2009, 127 vessels were active in the Hawaii-based fleet, two fewer vessels than in 2008 (Table 1, Fig. A1); participation in the fishery has been nearly constant over the past six years. Longline fishers made 1,342 longline trips in 2009 (135 less than in 2008), including 1,241 using deep-set gear to target tuna (down 139 trips from 2008) and 101 using shallow-set gear to target swordfish (up 8 trips) (Table 1, Fig. A2). The Hawaii-based longline fishery deployed 39.3 million hooks in 2009, down 2.3 million hooks from 2008 (Table 1, Fig. A3). After increasing steadily from 1994 through 2007, the number of hooks has remained fairly stable for the past three years. A growing proportion of hooks are being set outside the U.S. Exclusive Economic Zone (EEZ) — 65% of the total hooks set in 2009. The remainder were deployed in the main Hawaiian Islands EEZ (24%), Northwestern Hawaiian Islands EEZ (9%), and in the EEZ of the Pacific Remote Island Areas (PRIA, consisting of U.S. possessions Wake Island, Jarvis Island, Howland Island, Baker Island, Kingman Reef, Palmyra Atoll, and Johnston Atoll) (3%).

In 2009, the Hawaii longline fleet caught 118,668 bigeye tuna (Table 1, Fig. A4), a reduction of 22% from the bigeye catch in 2008. Despite the decline in catch in 2009, the trend of bigeye tuna catch has been upward since the first year of logbook monitoring in 1991. In contrast, the trend in albacore catch has been downward since 1997. It reached a record low of 10,094 albacore in 2009; this is a decrease of 39% from 2008. After remaining relatively steady during 2002–2008, the catch of yellowfin tuna declined by 61% in 2009 to 13,376 fish.

The 2009 swordfish catch was 21,189 (Table 1, Fig. A5). This was 12% lower than the swordfish catch in 2008 despite a small increase in the number of hooks deployed in shallow sets targeting swordfish in 2009. The catch of striped marlin was 7,941 fish in 2009, a decrease of 45% compared to 2008; it has continued to vary during the 19-year period of logbook records. The catch of blue marlin in 2009 (4,271 fish) was close to the catch in 2008.

In 2009, the Hawaii longline fleet caught 60,145 sharks and kept 4% of them (Table 1, Fig. A6). Blue shark comprised 79% of the total shark catch (47,703 fish). In 2009, the fleet

¹ PIFSC Data Report DR-10-004
Issued 25 February 2010

caught 3,651 mako sharks and a record 7,009 threshers sharks. Catches of mako shark have steadily increased, whereas those of blue shark and thresher sharks have been relatively steady during the last several years (Fig. A6).

In 2008, the Hawaii longline catch of other key pelagic species included 63,394 mahimahi, 36,859 pomfret, 32,644 oilfish, a record high 21,266 moonfish, and 8,809 wahoo (Table 1, Fig. A7). Catches of all these species in 2009 were higher than levels in the 1990s, but those of wahoo and pomfret have declined slightly over the last several years.

The longline logbook statistics reported above refer to all fishing areas combined. Summary catch and effort for 2009 were also compiled by several geographical sub-areas including: the MHI EEZ; the NWHI EEZ; the PRIA EEZ; the combined EEZ of MHI, NWHI and PRIA; and waters outside the U.S. EEZ. These statistics are presented in Tables 2-6. Summary statistics for the entire fishing area in 2009 are also presented for each distinct trip type: swordfish-targeted trips using shallow-set gear (Table 7) and tuna-targeted trips deploying deep-set gear (Table 8).

This report is available in PDF format on the PIFSC Web site at <http://www.pifsc.noaa.gov/fmsd/reports.php>. The Web site also provides quarterly and yearly charts and an archive of quarterly and annual summary tables of fish catch and fishing effort from 1991 to the present. The statistics in the online graphs and archived tables are updated periodically as new records are added to the database and corrections are made.
